EXPERIENCE

Data Scientist III / Engineer III

Nov. 2024 – Present

Verizon

- Built churn models and an intervention simulator estimating the **incremental impact** of retention treatments (SMS, email, pricing/fee adjustments) on customer behavior, lifting internal decisioning coverage from **0% to 60%** and cutting outsourced engagement volume by ~35%.
- Architected a full-stack **credit-risk platform** that synthetically generates customer data to simulate credit-policy changes and their impact on bad-debt writeoff across **\$1.2B+ in exposure**, with zero production data.
- Led 2 explainable-AI (XAI) frameworks (Streamlit/Qlik) isolating real-time drivers of Verizon Gross Adds, cutting hypothesis-generation time **73%** and presenting to **100+ stakeholders and executives**.

Data Scientist I

Jan. 2023 – Nov. 2024

Verizon

- Ran **K-Means segmentation** that surfaced 3 at-risk customer cohorts and shaped new retention campaigns, and built Tableau/BigQuery dashboards that eliminated **10+ hours** of weekly manual reporting.
- Automated serverless **time-series forecasting** for 9 value-segment consumer brands (Walmart, Tracfone, Straight Talk, FiOS), pioneering a 12-hour email-report system adopted across 3 organizations.
- Established a centralized data-science pipeline framework/API for Corporate Finance on GitLab, Domino Data Lab, and GCP, making cross-team collaboration **63% more efficient**.

Data Engineering Intern

Oct. 2021 – Jun. 2022

Human Genetics Institute of New Jersey

- Trained **DeepLabCut** models for kinematic pose estimation on **1,000+** wet-lab experiments (Python, TensorFlow, CUDA) and shipped 4 IMARIS extensions automating 3D lesion reconstruction, making post-microscopy analysis **5x faster**.

PROJECTS

Persuade | *Causal Inference, Heterogeneous Treatment Effects* · geetpurohit.com

2026

- Built a causal uplift model estimating **heterogeneous treatment effects** per customer with T-learner and X-learner meta-learners, quantifying the incremental lift of a treatment and validating it on the **Qini curve**, where accuracy is undefined for counterfactual targeting.
- Deployed it as a **zero-backend, in-browser app** that scores customers live and separates persuadables from sure things, lost causes, and sleeping dogs, directing treatment spend at the users a campaign actually moves.

Significance | *A/B Test Design & Analysis Toolkit* · geetpurohit.com

2026

- Built an interactive experimentation toolkit that **powers and sizes** an A/B test, then analyzes results with a two-proportion z-test and confidence interval, computed live in the browser.
- Demonstrated via Monte Carlo the two failure modes that invalidate most tests: **peeking** (false positives inflating past **25%**) and skipping **CUPED** variance reduction (~**50%** tighter estimates).

CreditLens | *Explainable Credit-Risk Scorecard Engine* · geetpurohit.com

2026

- Built an end-to-end credit-default engine on **2.26M** LendingClub loans (weight-of-evidence binning, logistic scorecard, XGBoost/SHAP challenger; validated on ROC-AUC, KS, Gini, and calibration), deployed as a **zero-backend, in-browser app** with no target leakage.

TECHNICAL SKILLS

Experimentation & Causal Inference: A/B test design, quasi-experimental methods, uplift modeling, meta-learners (T/X-learner), heterogeneous treatment effects

Languages: Python, SQL, R, Scala, Java, JavaScript/TypeScript

ML: scikit-learn, XGBoost/LightGBM, PyTorch, TensorFlow, LLMs, MLflow

Data, Cloud & Viz: Apache Spark, GCP/BigQuery, Airflow, dbt, Docker, PostgreSQL, Tableau, Streamlit

EDUCATION

Georgia Institute of Technology

In Progress

M.S. in Analytics, Computational Data Analytics Track

Rutgers University

Dec. 2022

B.S. in Computer Science & B.S. in Astrophysics, Minor in Mathematics, GPA: 3.7/4.0
